

Heatmap showing the relationship between data set num set (x-axis) and train len set (y-axis). The color scale ranges from 0.1 (light blue) to 0.3 (dark blue). The highest values (around 0.3) are concentrated in the top-left corner, specifically for data set num set 10 and 64, and train len set 10 and 64. The values generally decrease as both data set num set and train len set increase.
